PROFESSIONAL SUMMARY

Analytics Engineer with 4+ years working at the intersection of cloud architecture (Azure/AWS), data engineering, and BI: designing Lakehouse and warehouse architectures (Snowflake, Databricks, Azure Fabric), building pipelines that feed them, and owning the BI layer as the go-to partner for stakeholders who rely on it to drive decisions.

WORK EXPERIENCE

Data Analyst

Barclays | AWS, Azure Fabric, Python, SQL, Power BI, GitLab, Airflow, Real-time Streaming

Jun 2023 – Present

Whippany, NJ

- Built an AI-driven planning pipeline (Claude API, Teams Copilot, Jira, GitLab MCP) that drafts Gherkin tickets, Definition of Done, and acceptance criteria from meeting notes, cutting sprint planning from 24 to under 8 hours (~65%) with human-in-the-loop approval.
- Built an Apache Airflow DAG framework with Python validation and auto-retry running 30–40 Power BI production migrations per quarter, cutting coordination and rollout time ~65% and removing the need for an on-call engineer during deploys.
- Set up GitLab CI/CD with automated Python testing and deploy gates: 20% increase in successful releases with near-zero manual intervention, reclaiming 10+ engineering hours weekly.
- Stood up the Snowflake and Databricks-to-Power BI integration powering dashboards used daily by ~300–400 finance and operations users, cutting query times ~40%.
- Architected serverless ETL pipelines using AWS Glue (PySpark), S3, and Redshift to process 4TB+ daily data, using incremental load and partition pruning to cut processing costs 35%.
- Built a data governance framework covering data quality, outlier detection, and compliance metrics, turning reactive triage into proactive monitoring and cutting governance overhead ~40%.
- Streamed 1TB+ of daily data from Kafka into a Microsoft Fabric Eventhouse, using KQL databases and a Lakehouse for storage, to deliver real-time dashboards at <2s latency with a caching/retention strategy to manage storage costs.
- Built Spark-based data pipelines in Azure Fabric with medallion-architecture table design, scheduled refreshes, partitioning, and idempotency strategies, automating manual API calls, data cleaning, and validation checks to save 10+ hours of manual work weekly, while cutting storage costs ~18% through deduplication, clear partitioning, and documented data descriptions.

Data Management Assistant

Northwestern University | GCP BigQuery, Looker, Python

Jan 2023 – May 2023

Chicago, Illinois

- Ingested ~10M rows of Chicago crime data into GCP BigQuery with a normalized schema and date/precinct partitions, giving NGO partners a queryable dataset they use to identify geographic and temporal patterns and feed downstream predictive analyses.
- Built Looker and Plotly DASH dashboards that became the NGO's day-to-day view of crime rates across Chicago counties, replacing ad-hoc CSV pulls with a self-serve tool leadership used to spot patterns and prioritize outreach by neighborhood.

Machine Learning Engineer Intern

Ready Tensor, Inc. | Python, R, AWS, Docker

Jun 2022 – Aug 2022

San Diego, CA

- Developed machine learning models with Python and R, achieving high performance through hyperparameter tuning.
- Created Dockerized solutions for real-time model training and testing, enabling scalable deployments on AWS SageMaker.

Data Science Associate

SkyQuest Technology Group | NLP, Python, Streamlit

Jan 2021 – Jul 2021

Gujarat, India

- Optimized BERT-based NLP models for News Analytics, achieving 85% classification accuracy, with outputs visualized in a Streamlit dashboard.

TECHNICAL SKILLS

Languages: Python, R, JavaScript, SQL, Ruby, HTML/CSS

Cloud: AWS (EC2, Lambda, Glue, S3, Cloud9, Sagemaker, Redshift, RDS, EMR, Hadoop User Experience (HUE), HiveQL, Kinesis, Kafka), GCP (BigQuery), Azure (AI Foundry, Power Automate, Power BI, Azure Functions)

Frameworks: Terraform, TensorFlow, Keras, Django, Flask, Apache Spark (PySpark), Apache Airflow

EDUCATION

Georgetown University – The Graduate School of Arts and Sciences

Master of Science in Data Science and Analytics; GPA: 3.78/4.0

Aug 2021 – May 2023

Washington, DC

University of Mumbai – Thadomal Shahani Engineering College

B.E. Electronics and Telecommunication; GPA: 3.7/4.0

Aug 2016 – May 2020

Mumbai, India

CERTIFICATIONS

Airflow 3 Fundamentals

Astronomer

Nov 2025

Terraform Associate

Hashicorp

Jun 2025
